

We keep Growing ...

The Garden Club has developed into the SKS ECO CLUB

What began with “The Hope of Hunger Community Garden” has grown into a club that not only will help feed those in need in our community but also introduce us to the skills which will enable us to learn more about our environment and to hopefully teach us how to become better stewards of our earth.

Philadelphia Insectarium
and Butterfly Pavilion

We are happy to announce That the SKS ECO CLUB will be partnering with the Philadelphia Insectarium and Butterfly Pavilion. Director of the Insectarium, John Cambridge, PhD, will be guiding club members in a seven-week program where ECO CLUB members will have the opportunity to work on four different hands on ecology projects which will include, milkweed planting, solarizing forest areas, planting an edible garden and learning about and meeting different IBP insects each week.

Would you like to learn more????
